

## The Cloud is Here: Embrace the Cloud

If you haven't already migrated your Progenesis software to the cloud, now is the perfect time to consider the upgrade. Discover an array of benefits that will elevate your organisation to new heights!

### Always be on the latest version of the software

By being on the Progen Cloud you are guaranteed to be on the most recent version of the software, without any on-prem installations to manage. This means you are always accessing the latest product developments and releases - with minimal effort.

### Seamless Migration Process

Transitioning to the cloud has never been easier! The migration process is well-documented and expertly managed. Experience a hassle-free transition that minimises disruptions and maximises the benefits of cloud adoption.

### Faster Support and Resolution

Experience a significantly shorter turnaround time for resolving support and technical queries when you're on the Progen Cloud. Our expert support team is readily available to assist you, ensuring that any issues are addressed promptly, keeping your operations running smoothly.

## BI Reporting with Progen Analytics

BI Reporting is becoming a key requirement throughout organisations. Migrate to the Progen Cloud and get direct access to a new dynamic suite of dashboards and reports built in Progen Analytics. We'll also teach you how to build your own reports – and ad hoc queries.

For more complex tailored reports, we can build these for you. These can be exported into formatted excel templates or if you wanted something more visual, a designed pdf version which includes graphs and tables.

We have some examples we'd love to show you, please get in touch.

## Explore the Power of Petra

Unlock the true potential of your cloud environment with access to companion products like Petra. Revolutionise your lease and property management processes with this game-changing technology that has garnered rave reviews. Don't miss out on this incredible breakthrough – [book a demonstration now!](#)

### More secure

In the cloud version we have built in Multi-factor Authentication (MFA), that means every time you log on, the system asked you to enter a code it just sent to your mobile phone. An extra layer of security for all users. It stops a hacker who has found an id and password getting into your system.

**For enquiries, demo or getting a quote on upgrading to the cloud – please contact Richard Hunsley.**
